PIONEER
WATER TANKS

COMMERCIAL SPECIFICATION CATALOG

Discover the difference

PIONEER
WATER TANKS

Pioneer Water Tanks manufactures tanks from 5,076 gallons to 703,126 gallons capacity. Structural engineering is suitable for rural, domestic, or commercial use utilizing durable ZINCALUME® steel.

Any Pioneer Water Tank can be designed to suit earthquake zones, cyclonic regions, heavy industrial or highly specialized environments.

Our tanks feature the innovative and aesthetically pleasing PIONEER V-LOCK® profile with a protective capped bolt system and fully enclosed vertical cover for optimal strength and structural integrity.

OUR COMMITMENT

Pricing
Committed to providing a competitive price and personalized service to match individual needs.

Experience
Dedicated staff with practical knowledge and years of experience.

Flexibility
We listen to your specific needs and recommend a suitable custom water storage solution.

Engineering
Through our qualified engineering personnel and independent consultant engineers, we provide high quality professional design and support services.

Installation
Thorough check methods are employed to ensure correct installation from beginning through to commissioning. Our procedures provide for ease of installation, less time on site, minimal infrastructure and construction personnel.

Distribution
Pioneer Water Tanks America is the exclusive Distributor for North America. Our network provides local sales, service, and installations.

Quality & Service
Pioneer Water Tanks are committed to providing the best quality product and service.

Aesthetics
Pioneer Water Tanks offer color options to integrate with the surrounding environment.

Advanced Production Technologies
Continual research and development and innovative production methods create uniform quality. A culture of continuous improvement forms a key pillar of Pioneer Water Tanks' business success.

GROSS CAPACITY CHART

Tank model	Tank diameter	Number of rings/Wall height with Gross Capacity in Gallons							
		R1 3 ft 9 in	R2 7 ft 2 in	R3 10 ft 7 in	R4 14 ft	R5 17 ft 5 in	R6 20 ft 10 in	R7 24 ft 3 in	R8 27 ft 8 in
XL01	8 ft 10 in	1,714	3,249	4,813	6,363	7,913

TANK DATA SHEET

Wall structure

Bluescope ZINCALUME® steel, COLORBOND® steel or COLORBOND® Ultra steel panels complying with AS1397. Most severe earthquake loads to AS1170.4. 8-80 V-LOCK wall profile to AS4600.

Steel grade

G300 ZINCALUME® steel.

Protective coating

ZINCALUME® steel (zinc/aluminium/magnesium alloy) AM125 heavy-duty coating. Also available in COLORBOND® steel.

Bolting specification

M10 – M16 galvanized, flanged head, high tensile bolts.

Dome roof

- Bluescope ZINCALUME® steel, COLORBOND® steel or COLORBOND® Ultra steel.
- Custom orb profile.
- 0.42bmt thickness.
- High tensile G550.
- Hot dipped fully self supporting galvanized roof trusses.

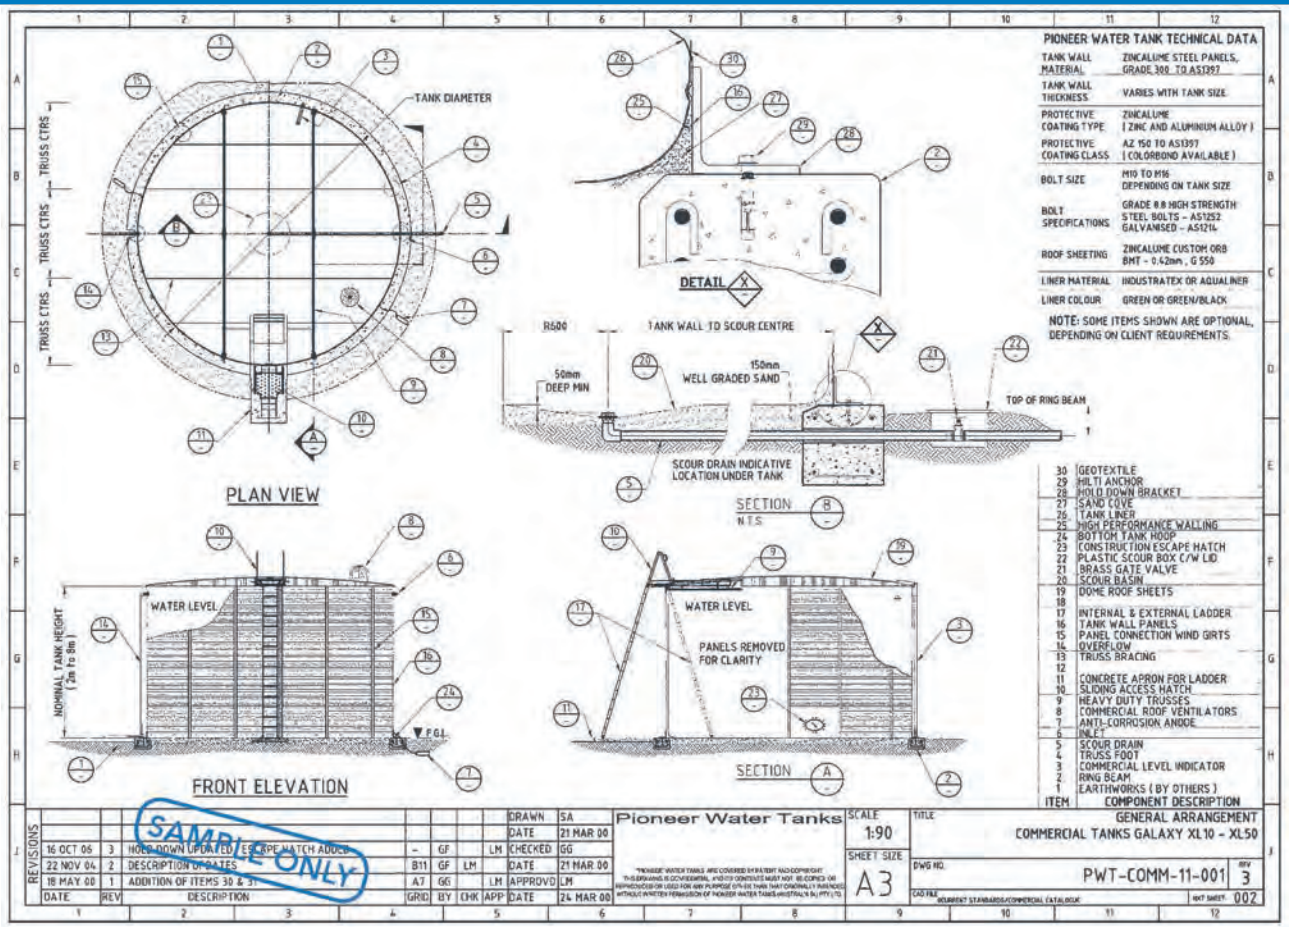
Nozzles

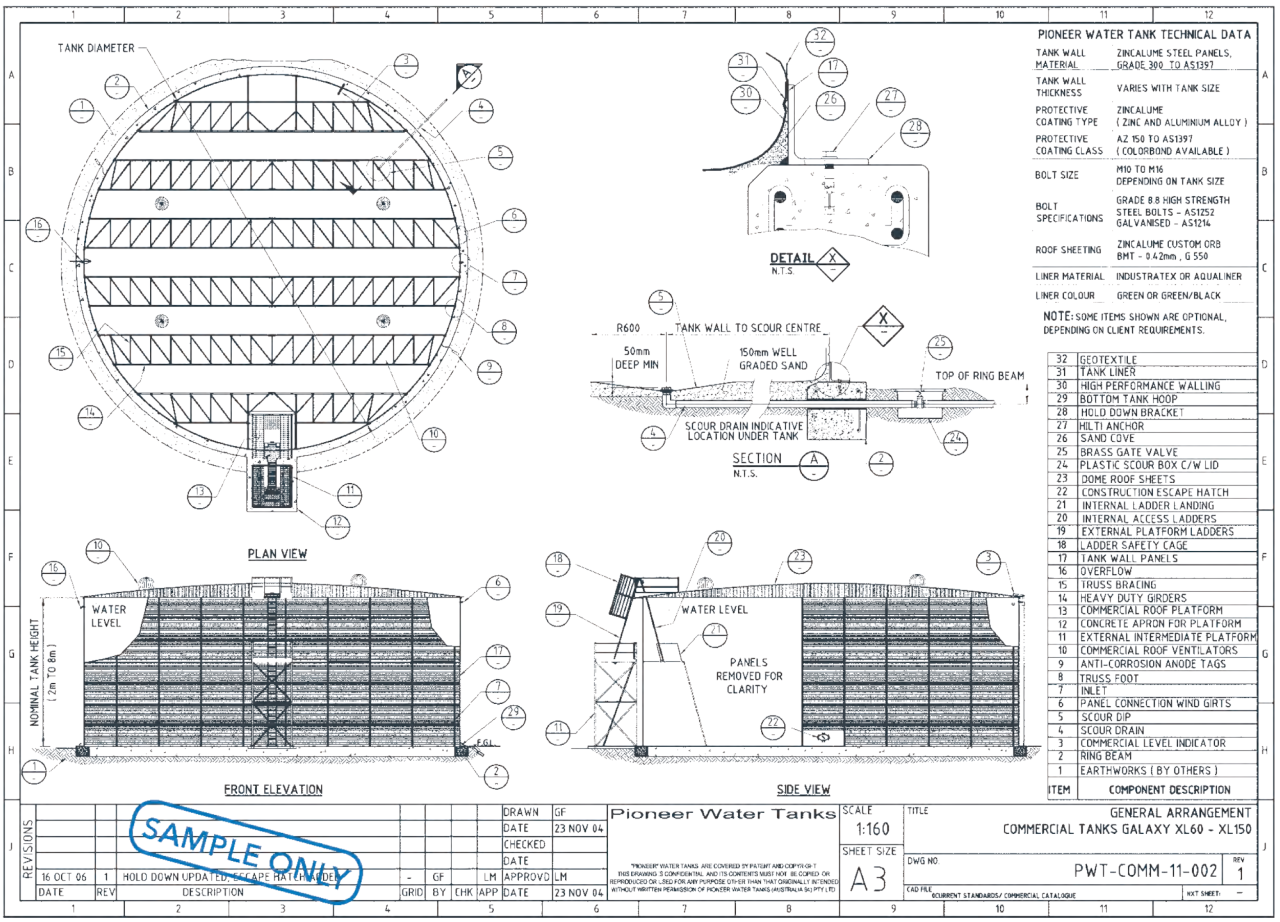
Nozzles are manufactured from either PE100 SDR17 HDPE or hot dipped galvanized steel (available on request).

Manufacturing and installation

This can be either client or tank specific or both. Each project will be confirmed in writing and comprise a full installation, manufacturing and installation schedule. Note that Pioneer Water Tanks requires certain information prior to commencing manufacturing. This will be advised to you at the time of proposal.

GENERAL ARRANGEMENT EXAMPLES (XL10 – XL150)





THE PIONEER V-LOCK® ADVANTAGE

The PIONEER V-LOCK® is the result of rigorous research and development.

The PIONEER V-LOCK® tank profile is designed to minimize stress on the liner during tank level cycling.

Specifically engineered with a flat section at the bolted panel connections, the PIONEER V-LOCK® vastly improves the structural integrity and overall aesthetic appeal of your finished tank.

UNIQUE SECURED LINER

Pioneer Water Tanks understands the importance of the longevity of your tank liner.

All Pioneer Water Tanks liners are uniquely secured to the tank wall at multiple points to provide optimal support for the liner. This support prevents the liner from pulling away from the tank wall and secures it in position.

The result: less stress on the liner and prolonged service life of your tank.

TANK LINERS

AQUALINER® Fresh and Industratex® have been exclusively developed and manufactured for Pioneer Water Tanks to provide a watertight liquid storage membrane.

Strength, flex resistance, abrasion resistance, chemical resistance, waterproofing and leak proofing has been considered in the design of AQUALINER® Fresh and Industratex®. Both liners can be custom manufactured for the relining of existing concrete, steel and other types of water tanks.

Primarily intended for potable water storage, your tank liner can be adapted for a variety of non-potable water grades including grey treated, bore, ground or well water.

Liner Terms and Definitions

Tensile strength:
Strength of material, measured by tensioning a 50mm wide sample in both directions - warp and weft. Result is the force measured in Newtons (N) at the point at which the material breaks.

Elongation:
During tensile test a stretch measurement is taken prior to material breaking.

Warp:
Threads stretched in a loom.

Weft:
Threads that cross the warp.

Wing tear:
Force (N) necessary to tear a sample of the material in the warp and weft weave direction. Warp test is measured by tearing in the weft direction and visa versa for the weft tear.

Tongue tear:
Similar test to wing tear, parallel cuts are made to the material the to create a “tongue”. Force (N) is applied tearing the material. Warp is measured by tearing in the weft direction and visa versa for the weft tear.

Coating adhesion:
Force (N) needed to separate a 50mm wide sample lamination (coating) from the weave.

Flex cracking:
Measured by flexing material until it deteriorates (measured in cycles).

UV stabilization:
Ability of material to withstand continuous exposure to UV light.

Flume (water proof) test:
A fabricated test sample (tube is increasingly pressurised with water until the material leaks. Measurement and inspections are conducted at regular intervals and recorded.

Abrasion resistance:
Ability of the material to withstand abrasive contact.

AQUALINER® FRESH DATA SHEET

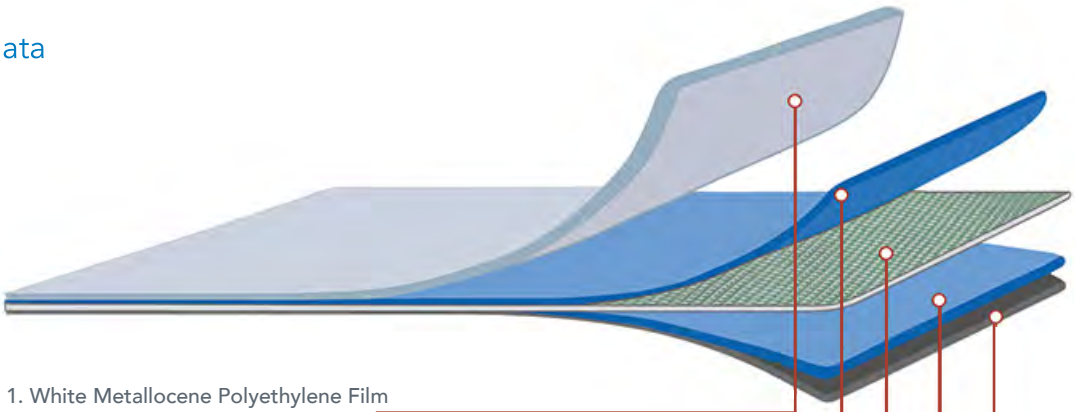
This data sheet sets out the criteria for evaluating the suitability of the AQUALINER® Fresh as a core component of the liner tank system.

Approvals

- American Standard: NSF/ANSI Standard 61 - Drinking Water Approval. Certificate 3A240-01.
- British Standard: BS 6920 - Suitable for use in contact with potable water.
  Tested by Water Regulations Advisory Scheme, test report: MAT/LAB 356M, 607M & 608M.

Specifications and data

Material make up:



Layer 1. White Metallocene Polyethylene Film

Layer 2. Propriety co-extrusion of Thermoplastic Olefins (TPO's) and Metallocene Technology

Layer 3. Weave: High tenacity multifilament Polypropylene

Layer 4. Propriety co-extrusion of Thermoplastic Olefins (TPO's) and Metallocene technology

Layer 5. Black Metallocene Polyethylene film embedded with Sanitized® technology

Tensile strength:
Newtons per 50mm
(AS2001.2.3)
Warp: 1901 N
Weft: 1353 N

Elongation at break:
(AS2001.2.3)
(AS4878.6 – method 1)
Warp: 24.8%
Weft: 18.8%

Wing tear:
Newtons per 50mm
(AS2001.2.10)
(AS 4878.7 – method A2)
Warp: 255 N
Weft: 135 N

Coating adhesion:
Newtons per 50mm
(AS4878.2 – preparation 2)
75-85 N

Flex cracking:
(AS4878.9 – method B),
97,000 cycles

Max/min temperature:
-22° F to +158° F

UV Stabilization:
Both sides of the liner have UV resistance. However, excessive exposure and temperature may dry and shrink the material.
Pioneer Water Tanks recommends that the AQUALINER® Fresh be covered.

Material thickness:
0.60mm

Unit mass/weight (AS4878.2):

405 grams per square metre.

Seam weld:
25mm weld with 25mm seal tape welded to both sides covering edges of fabric.

Flume test:
Water beads: 20 metres of water head pressure.
Burst: 20 metres of water head pressure.

Chemical resistance:
AQUALINER® Fresh is resistant to various chemicals. To be certain, we recommend a chemical analysis report be completed to confirm suitability.

pH: 5 - 10
Chlorine: 3 -5ppm

Note: Intense levels of chlorine such as shock treatment and tablets can have an adverse effect on the AQUALINER® Fresh. It is therefore recommended controlled dosing systems be used.

Special comments:
AQUALINER® Fresh can store a wide variety of non-aggressive and aggressive waters however you should also be considerate that the steel structure may not be so readily accepted.

INDUSTRATEX® DATA SHEET

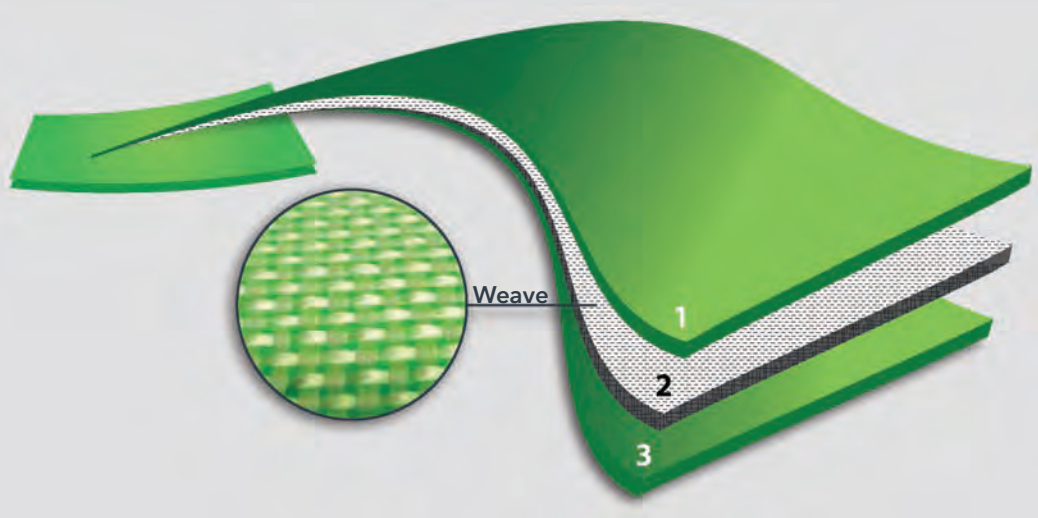
This data sheet sets out the criteria for evaluating the suitability of Industratex® as a core function of the liner tank system.

Approvals

- American Standard: NSF/ANSI Standard 61 - Drinking Water Approval. Certificate 3A240-02.

Specifications and data

Material make up:



Layer 1 - Green PVC film
Layer 2 - Polyester weave
Layer 3 - Green PVC film

Tensile strength:
Newtons per 50mm
(AS2001.2.3)
Warp: 2600 N
Weft: 2400 N

Tongue tear:
Newtons per 50mm
(BS3424.5)
Warp: 550N
Weft: 450N

Coating adhesion:
Newtons per 50mm
(AS1441.1973)
90 N (min)

Flex cracking:
(AS 1441.6)
400,000 cycles

Max/min temperature:
-4° F to +122° F

Stabilisation:
Material is UV stabilised therefore may be exposed to the sun. Excessive exposure and temperatures may dry and shrink the material. It is Pioneer's recommendation that all Industratex® liners be covered.

Material thickness:
0.06cm

Unit mass/weight:
610 grams /m2

Seam weld:
2.5cm weld

Flume (water proof) test:
Water beads: 65.62 feet of water head pressure.

Burst: 82.02 feet of water head pressure.

Chemical resistance:
Industratex® is resistant to various chemicals, but to be certain if suitable for your application we recommend a chemical analysis report be forwarded to confirm.

pH: 5 - 10
Chlorine:
Maximum 50ppm

Note: intense levels of chlorine such as shock treatment and tablets can have an adverse affect on the Industratex®. It is therefore recommended that controlled dosing systems be used.

Recommended applications:
All water storage: potable, ground, bore well, water, river, spring water and seawater.

Special comments:
Industratex® can store a wide variety of non aggressive and aggressive waters however you should also be considerate that the steel structure may not be so readily accepting.

ROOF OPTIONS

Pioneer Water Tanks has invested extensive effort developing a roof structure that is not only easy to install but stronger and easily adaptable for most applications.

The innovative truss foot connection allows a flush strong bolted connection with the tank wall, resulting in direct load transfer from roof structure to tank wall and then to the ground.

All roof structures utilize the strength of square hollow sections (SHS), fully welded and post galvanized to build a strong, robust structure that will perform in all conditions.

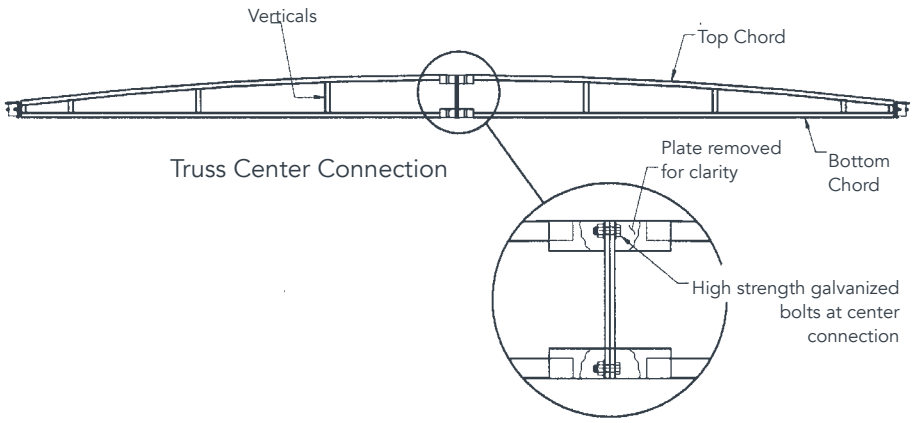
Additionally, all dome roof structures are carefully engineered to achieve load paths of uniform capacity to maximize cost efficiencies.

ROOF OPTIONS: INDUSTRY STANDARD

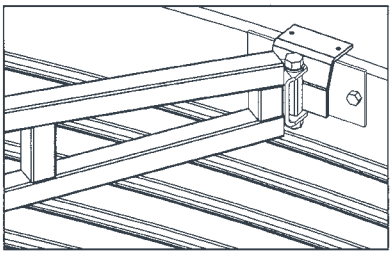
This is a robust engineered roof structure comprising SHS tube members fabricated into welded roof trusses with swivel truss feet to enable secure alignment with the tank wall.

The SHS trusses are high strength/ high ductility and are engineered to provide direct load paths for all loads that are incident to the roof into the tank wall. The structure is typically galvanized to ensure excellent performance and long life. The roof structure is capable of handling construction and maintenance loads as required by AS1170.1.

As with most light building-type structures, personnel need to restrict their footprints to the lines of the trusses. This roof is suitable for most applications where standard access hatches are required, and when not located in an exposed area subject to gales. These roofs are designed in accordance with the relevant clauses of AS1170.0, AS1170.1 and AS1170.2, and can withstand regional wind speeds of up to 141.08 feet per second, as specified in AS1170.2.

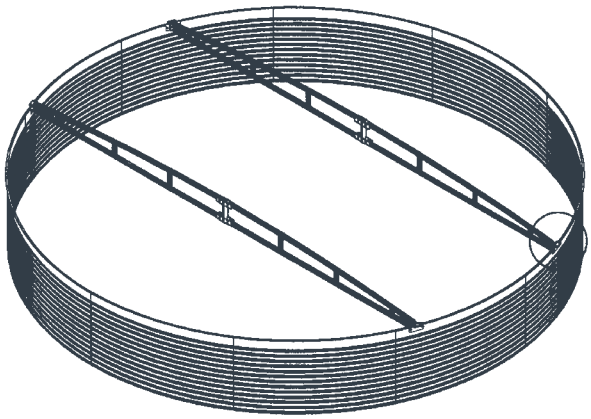


Truss Center Connection



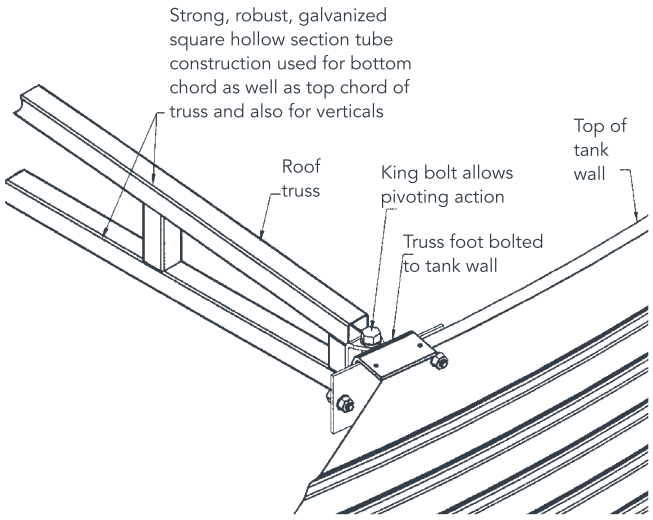
View of truss connection to tank wall from inside

Pivoting action of truss enables correct alignment with tank wall, no matter where the truss lands



Plan of Tank

Engineered roof structure design assures properly proportioned structural elements and load transfer from the roof to the ground.

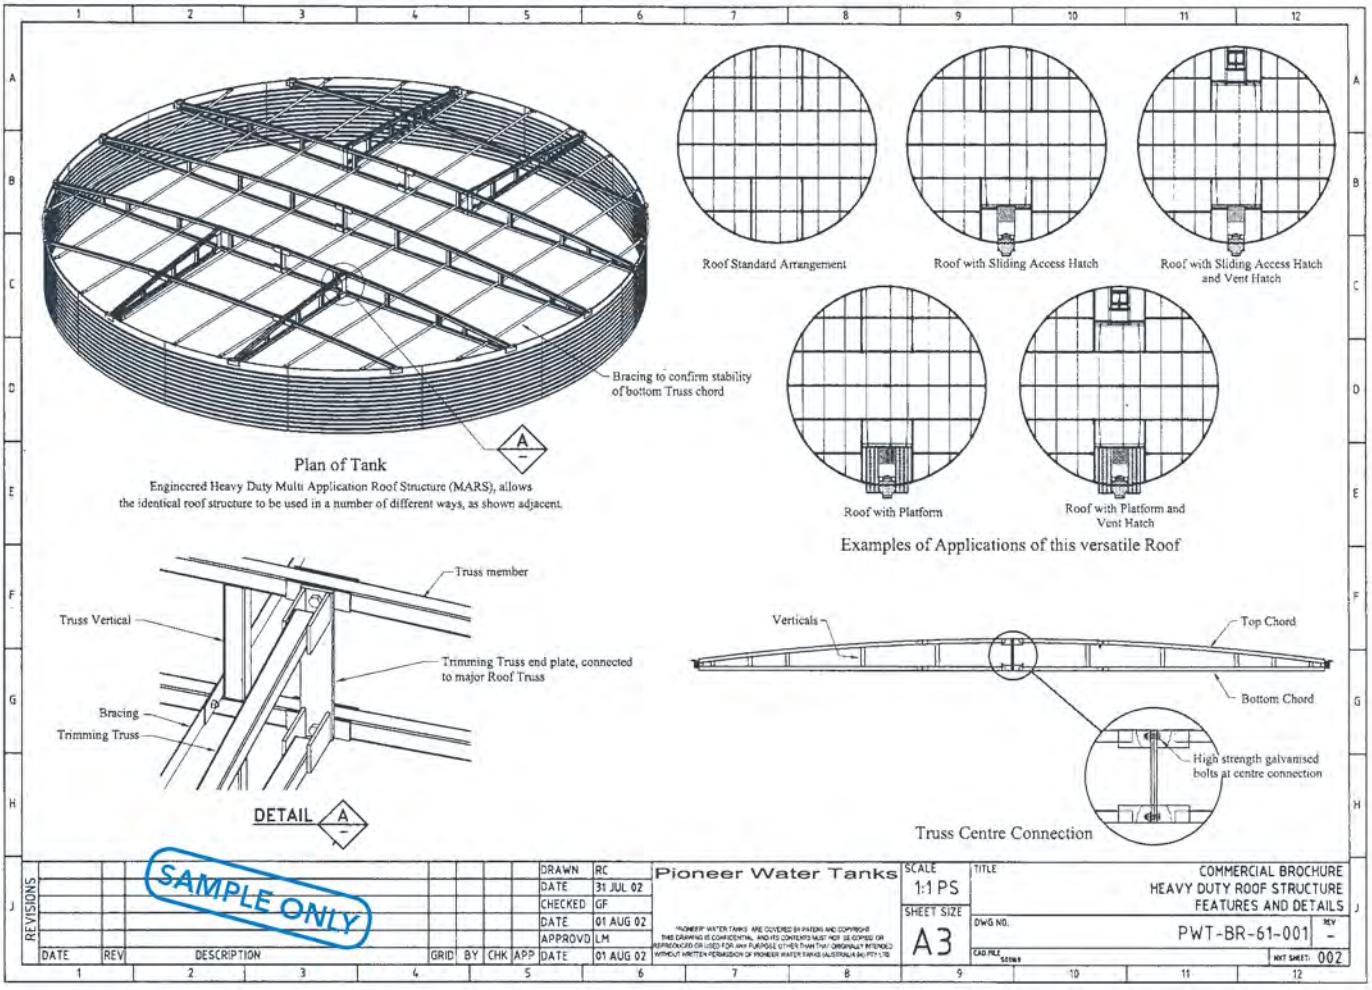


ROOF OPTIONS: HEAVY DUTY

The heavy duty roof is designed in accordance with the relevant clauses of AS1170.0, AS1170.1 and AS1170.2 to withstand minimum regional winds of up to 43 metres per second.

Embodying the features of the industry standard roof design , the heavy duty tank roof is capable of handling heavier loads arising from larger platforms such as the two metre by two metre roof platform and handrails.

The heavy duty roof has been structurally designed to enable mounting of ancillary features such as a vent hatch on one side of the roof diametrically opposite the access hatch.

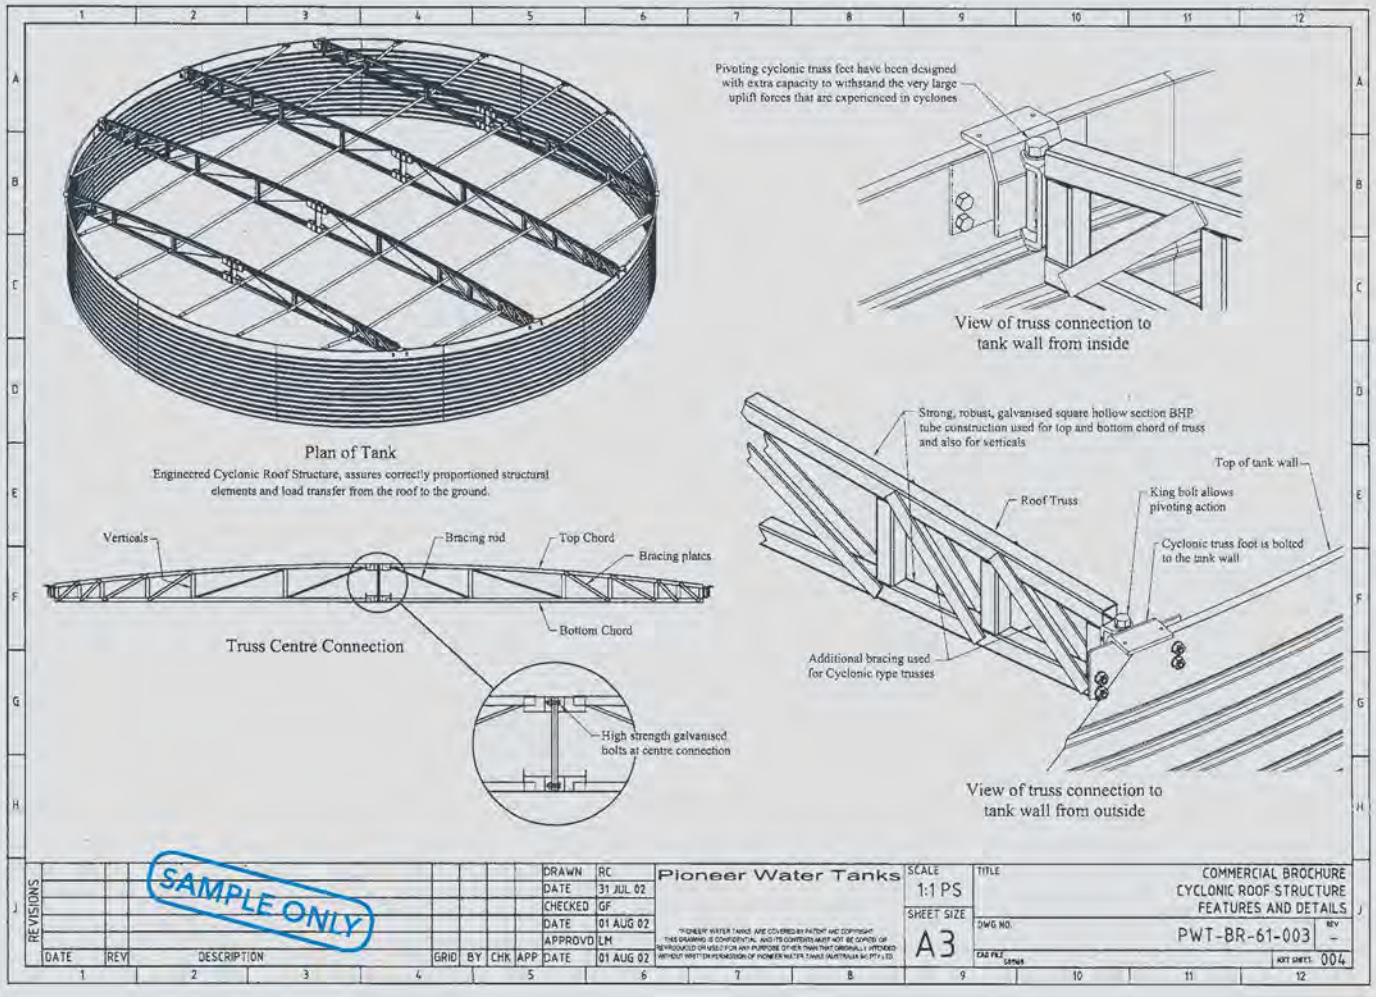


ROOF OPTIONS: CYCLONIC

Two cyclonic roof designs are available for Cyclonic Regions C and D in accordance with the relevant clauses of AS1170.0, AS1170.1 and AS1170.2.

Regional wind speeds in accordance with AS1170.2 for Region C and Region D cyclonic roofs are 65 metres per second and 82 metres per second respectively.

The cyclonic roofs embodies the features of the heavy duty roof design with roof trusses of greater depth and closer spacing to withstand the higher wind velocities expected in Cyclonic Regions C and D.

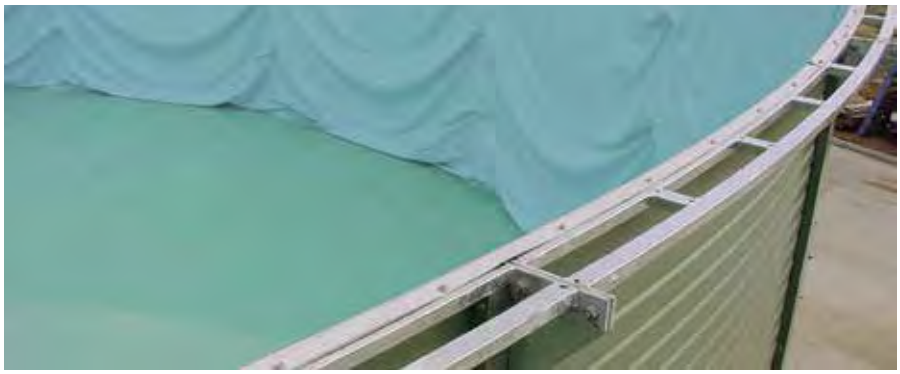


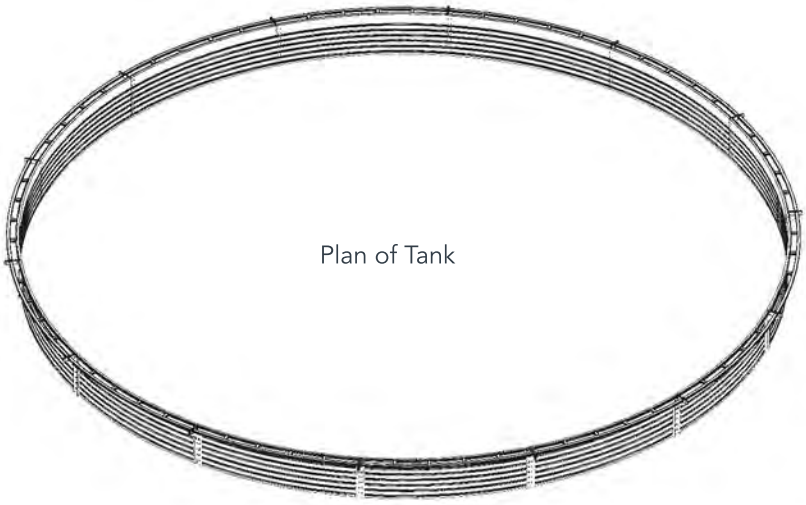
ROOF OPTIONS - OPEN TOP TANKS

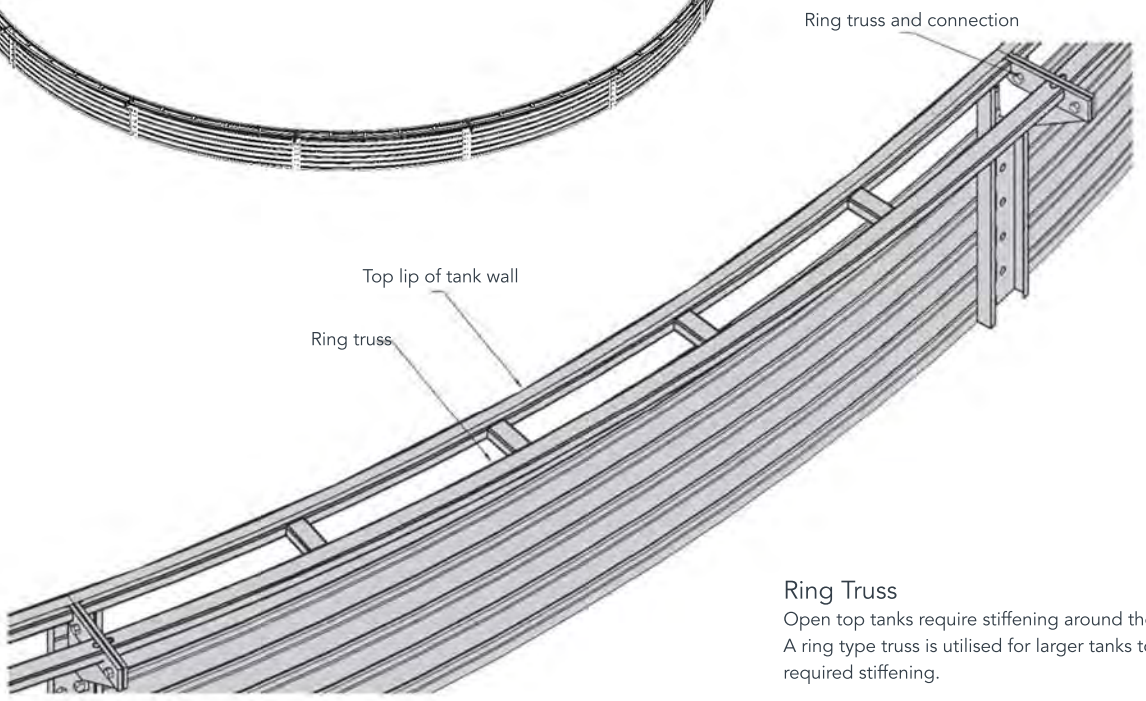
Pioneer Water Tanks have developed a system for tanks without the need for a roof structure.

The open top tank ring truss gives superior strength and stiffness to the top edge of the tank body as shown in the images below.

This simple, but very effective solution works very well for tanks in the effluent treatment industry whereby special ring trusses must be designed to accommodate loads imposed from equipment such as floating aerators.



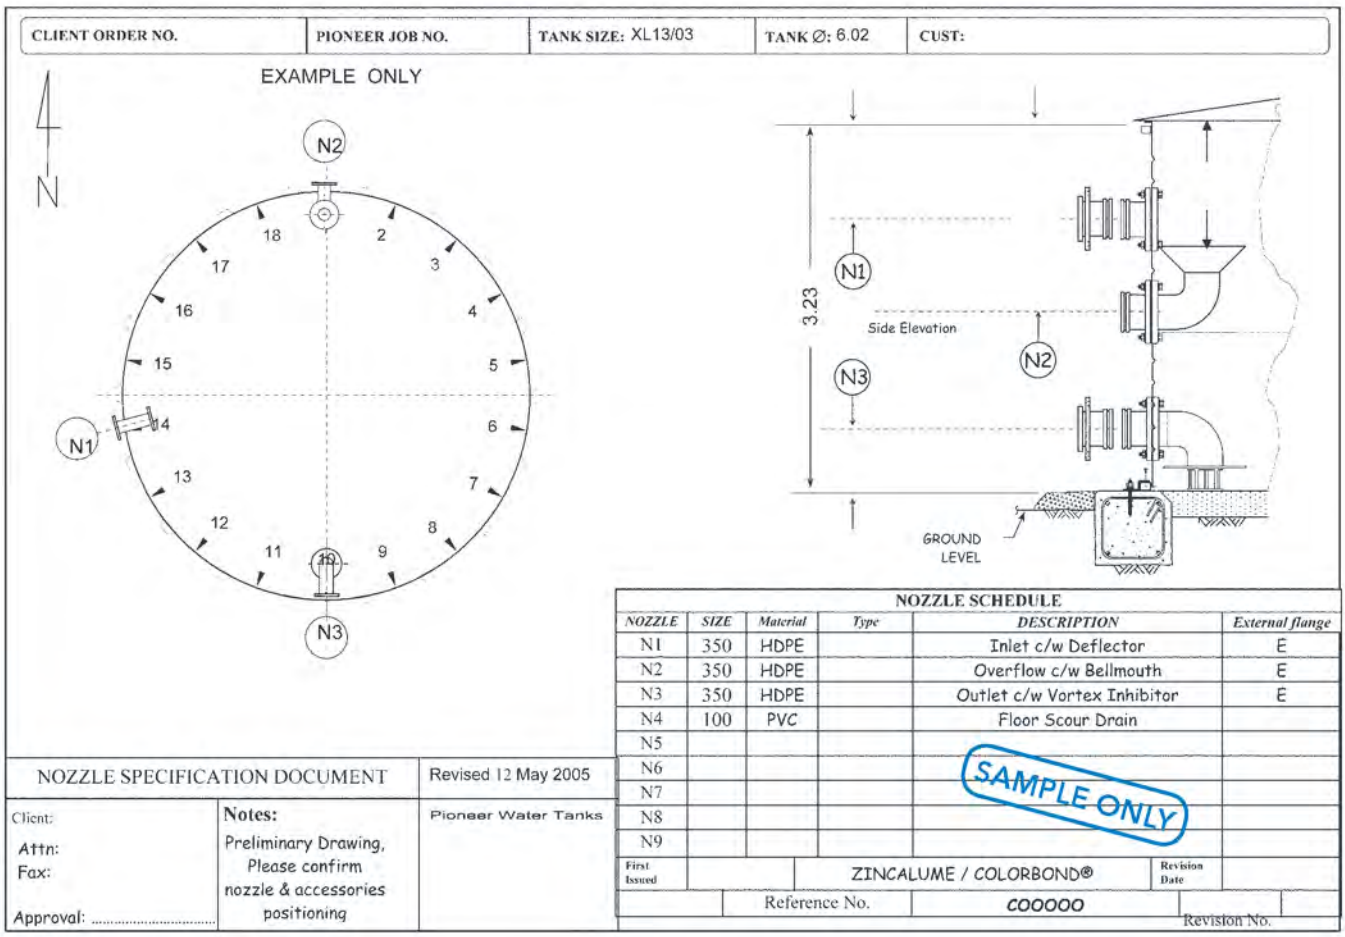




Ring Truss

Open top tanks require stiffening around the top edge wall. A ring type truss is utilised for larger tanks to achieve the required stiffening.

NOZZLES AND FITTINGS ORIENTATION



Nozzles

Pioneer Water Tanks has the flexibility to insert nozzles through the tank wall, roof or floor to suit most flange tables (BSP, D, E, DN, DIN or ANSI) with polyethylene or galvanized steel fitting also available.

Valves

Pioneer Water Tanks stocks a selection of valves including ball valves, butterfly valves, float control valves, diaphragm valves, check valves and electronic level sensors.

Nozzle orientation

The position and size of tank nozzles will determine the effective (or usable) storage capacity of your tank. Clients must nominate the position of each nozzle, inlet, outlet, overflow and the line to match existing or new pipe work prior to manufacture commencing.

The following nozzle orientation drawings are examples of plans that must be approved by the client prior to construction of your tank.

LADDERS AND ACCESS HATCHES

Pioneer Water Tanks ladders and platforms are specifically designed to suit a range of access requirements.

A range of internal and external ladders have been developed to comply with relevant sections of the LEED, TCEQ and FDEP compliance requirements.

All ladders are hot dipped galvanized or produced in stainless steel, fibreglass, aluminium or powder coated steel.

All commercial style ladders accommodate external and internal platforms, requirements for cages and heights of up to 26 feet. These ladders are designed to connect with either the Pioneer Water Tanks roof platform or commercial sliding access hatch.

ACCESSORIES

Ventilation
Airflow is very important when personnel have to enter the tank for routine maintenance checks or remove airborne pollutants and excess condensation from your tank. Procedures for working in confined spaces are recommended.

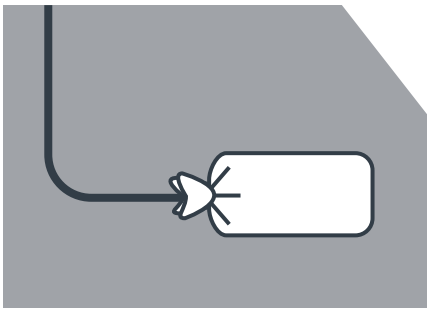
Scour Box
Protects the scour valve from accidental damage or tampering.

Side wall access hatch
The side wall access hatch allows access to the inside of the tank from ground level in case of an emergency.

Pipe brackets
Pipe brackets are used to stabilize external piping. It is the client's responsibility to ensure ground pipework is appropriately supported.

Fascia
The roof fascia conceals the trimmed edge of the roof sheeting and is ribbed in the same pattern as the wall panels to improve the overall aesthetics of your tank.

Level indicators
Level indicators can be externally mounted to rural or commercial tanks up to 26 feet in height to display the level of the water within the tank.



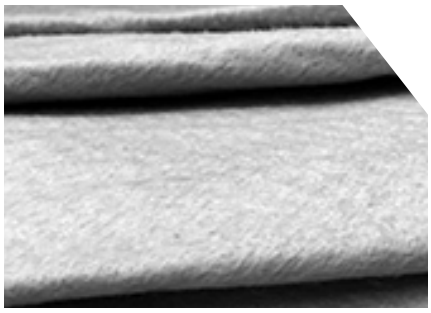
Anode
Anode: Magnesium alloy

Cable: PVC insulated and sheathed 6mm ø cross sectional area

Bag material: calico

Back fill mixture:
A premixed backfill surrounds the magnesium block. The ingredients are mixed in the following proportions as required by Australian Standards (AS 2239):

Bentonite 50%
Gypsum 45%
Sodium Sulphate 5%



Geotextile
A 100% polyester non-woven material with high breaking strength. We recommend geotextile when clean sand is difficult to source and protection is required against sharp objects such as stones or rocks that may damage or puncture the liner base.

Dust seals
Protects your stored water from dust, insects and frogs by installing dust seal between the corrugated roof and the top edge of the tank.

SITE AND FOOTING PREPARATION

TANK SITE REQUIREMENTS:

- For commercial size tanks, Pioneer Water Tanks requires a concrete ring beam foundation. Some exclusions apply. Please consult Pioneer Water Tanks for more details.
- It is necessary to construct a level area 10 to 13 feet larger than the diameter of the ring beam. The sand inside the ring beam should be a depth of 4 inches and compacted. At least 3.3 feet clear area is required all around the tank for construction.
- Site preparation must be completed prior to the arrival of installers.
- For sloping sites, adequate retaining and drainage must be installed prior to completion of the tank construction. Professional engineering advice should be sought on the retaining and drainage requirements.
- Pioneer Water Tanks guidelines have to be met to prevent re-charges for cost of additional remedial works that may be required. In the event our crew needs to stand down due to delays or incomplete site preparations, additional costs will be incurred by the client.
- Tanks must be commissioned upon completion of construction as per Pioneer Water Tanks commissioning procedures. If your tank has not been commissioned, Pioneer Water Tanks must be consulted prior to the filling of the tank.

OUR REFERENCES

Pioneer Water Tanks' commercial and technical sales team has many years of experience and an intricate knowledge of specialised industrial and commercial project requirements both in Australia and around the world.

Installing in excess of 4,000 water tanks each year World Wide and in over 30 countries, our fast installation time frame and flat packaging for easy transportation are just two of the reasons why our clients have chosen to invest in our tanks.

Following is a partial list of our past projects.
